Berg by Castle Creations Molded 4 Channel Receivers Now Available!

Made in the USA and available today!

Wellsville, KS, November 23, 2005 - Castle Creations announces the release of the all new Berg 4 channel molded case receiver. With the help of Peter Berg (the original designer), full production of the newly revised 4 channel receiver has begun. This highly anticipated product returns even better than ever, representing the state-of-the-art in microprocessor controlled receivers.

The new Berg 4 includes the following features:

4 Channels

Full Range

Programmable Fail Safe Mode

Fully Integrated Molded Case

Weight: 10 grams

Size: 0.8" x 1.4" x 0.5"

The Berg by Castle Creations Microstamp 4 Receiver has a full cavity injection molded case, that is no "plastic box" around the circuit board. The board is actually integrated fully within the mold material. This brings a whole new level of crash resistance and durability never before seen in any receiver. Would you expect your current receiver to be OK after it's been stepped on with your full weight? This one will be. It's absolutely full range allows use in any 4 channel operation from tiny indoor electric models to any 4 channel glow plane. Don't let the size fool you - "big" does not necessarily equal solid performance when it comes to receivers!

CASTLE CREATIONS

402 E. Pendleton Ave.

www.castlecreations.com

All Berg receivers feature True Digital Signal Processing (TDSP) as well as Transmitter Signal Recognition (TSR) technology, and represent the most selective and active signal processing available in any receiver. The results speak for themselves - full range, a unique "feel" that must be experienced to believe and performance that can only be described as 100% solid.

November 30, 2005.

As a privately held company, Castle Creations is a leader in speed control technology for the R/C hobby industry. All Castle Creations' controllers are designed and manufactured in the U.S.
