Berg by Castle Creations 4L Receivers Now Available Made in the USA and available today!

Wellsville, KS, November 23, 2005 - Castle Creations announces the release of the all new Berg 4L receiver. With the help of Peter Berg (the original designer), full production of the newly revised 4 channel receiver has begun. This highly anticipated product returns even better than ever, representing the state-of-the-art in microprocessor controlled receivers.

The new Berg 4L includes the following features:

4 Channels
Full Range
Programmable Fail Safe Mode
Weight: 4 grams
Size: .6" x 1.35" x .35"

Whether you demand solid performance in harsh indoor RF environments, parkflying, or even at the flying field in your .90 size airplane - the Berg by Castle Creations 4L can do it all. It's absolutely full range allows use in any 4 channel operation from tiny indoor electric models to full-blown glow planes. Don't let the size and weight fool you - "big" does not necessarily equal solid performance when it comes to receivers!

All Berg receivers feature True Digital Signal Processing (TDSP) as well as Transmitter Signal Recognition (TSR) technology, and represent the most selective and active signal processing available in any receiver. The results speak for themselves - full range, a unique "feel" that must be experienced to believe and performance that can only be described as 100% solid.

November 18, 2005.

As a privately held company, Castle Creations is a leader in speed control technology for the R/C hobby industry. All Castle Creations' controllers are designed and manufactured in the U.S.
