1/10th Scale Mamba Max Brushless Combos Are Here!

Olathe, KS, June 26, 2006. Castle Creations is pleased to introduce the new Mamba Max brushless speed control and motor system for 1/10th scale vehicles. After the success of the original Mamba 18th scale brushless systems, the Castle team now delivers a complete brushless system for 1/10th scale vehicles.

The Mamba Max combo offers insane power, incredible driveability, and rugged dependability. Users will be amazed at the smoothness and control Castle's industry leading software puts in their vehicle. Simply stated: the sensorless Mamba Max system provides more control over the entire range of operation than the long-outdated sensed systems can possibly offer!

Mamba Max controllers are ready to run out of the box, but users will want to hook them up to their computers via the ESC's USB port and the supplied cable and CD ROM in order to fine-tune settings such as the throttle curve, braking curve, and drag brake, to truly wring the last drop of performance from their cars. The Mamba Max brushless system can easily handle up to 12 NiMH/NiCad cells, or 3s Lithium Polymer packs to give users more power and speed than they can handle. The extra heavy duty BEC easily powers your steering servo and receiver.

The combos are available in 4600 Kv, 5700 Kv, (6900 Kv coming soon) and, for the ultimate in wheelie-popping power, a blistering 7700 Kv motor that leaves everything else in the dust. The Castle CM36s motors feature oversize bearings front and rear and powerful sintered neodymium magnets for dogbone twisting torque and sizzling speed.

The motor and controller offer matching wiring connectors to make your install neat and tidy. For more information, including product part numbers, graphics, and specifications, please visit: www.castlecreations.com/media/media_kits.html!

Doing brushless the way it should be done: Castle Creations' Mamba Max!
