

# Castle Creations Announces Release of X-Bus Telemetry Link

## For Immediate Release

**Olathe KS, March 29, 2016** – **Castle Creations**, the leader in electronic speed controllers (ESC) for radio control systems, is excited to announce collaboration with the radio experts at **Futaba® and Spektrum®** to release two incredibly useful and easy to use Telemetry products.

Air and Surface enthusiasts now have a means to receive and view telemetry data on compatible Spektrum® radios when using their favorite Castle ESC's.\*

The **Castle Telemetry Links** were developed based on communication protocol from **Spektrum®**. They become a communication module between the Castle ESC and the radio receiver and/or telemetry module where they are attached. The Castle ESC is then easily programmed through Castle Link™ to allow the bidirectional communication required to transmit data to the radios.

When setup and utilized properly, real-time data will aid in the overall enjoyment and safe operation of model airplanes, helicopters, and cars. Imagine the benefits of being notified by a configured vibration or sound alert when a defined threshold is exceeded, such as battery voltage, battery current or ESC temperature. Pilots can now react and avoid potentially costly repairs as well as gain insight into other parameters that can reduce the performance of an electric power system, such as excessive ripple voltage.

“We are very excited about this collaboration with **Futaba® and Spektrum®**”, says **Castle Creations’ President Jonathan Feldkamp**. “Telemetry is a powerful addition to any RC enthusiast’s tool box and provides confidence to maximize model performance and gain the competitive edge.”

### **About Castle Creations, Inc.**

**Castle Creations, Inc.** is a global manufacturer that has challenged the limits of technology since 1997. Based in Olathe, KS USA, **Castle Creations, Inc.** continues to pioneer high-performance electronic speed controls (ESC) and motors for the radio controlled (R/C) air, multi-rotor and car enthusiast markets as well as commercial UAV and drone markets. Our custom products continue to deliver high-performance electric drive solutions that are commonly used in motion control applications. For more information about our complete line of ESCs, drives, brushless motors and accessories, visit us online at [www.CastleCreations.com](http://www.CastleCreations.com) or email [sales@castlecreations.com](mailto:sales@castlecreations.com)
